10 SOLUTIONS FOR EVERYDAY PROBLEMS

This lecture will present creative solutions to the frustrations encountered by clinicians everyday. Dr. David Clark's modern approach to restorative dentistry showcases minimally invasive techniques for solving clinical impediments without compromising outcomes and aesthetics.

WHAT YOU WILL LEARN

- Managing deep caries and pulp capping
- The 6 keys to solid contacts
- Endodontic and post & core update
- 24 Hour bleaching technique for dark endodontically treated teeth
- Impression taking for new minimally invasive veneers and onlays
- Endodontic instrument and technique update: simpler and safer endodontics
- Better than porcelain? Achieving void free and mirror smooth composites
- GP ortho update: Should you be doing orthodontics? Which system should you use?
- The 10 gadgets you can't live without in everyday practice

BENEFITS OF ATTENDING THIS COURSE

Each participant will learn how to increase productivity, while improving their clinical success with an understanding of the must up to date techniques and methods.

WHO SHOULD ATTEND

Any dentist and/or staff who desire more information on current concepts.

Dr. David Clark founded the Academy of Microscope Enhanced Dentistry, an international association formed to advance the science and practice of microendodontics, microperiodontics, microprosthodontics and microdentistry. He is a course director at the Newport Coast Oral Facial Institute in Newport Beach, CA. He is co-director of Precision Aesthetics Northwest in Tacoma, WA, and an associate member of the American Association of Endodontists.

Hands-on

ACHIEVING MIRACULOUS SOLUTIONS WITH MODERN MATRICES

DIRECT COMPOSITES: MINIMALLY TRAUMATIC PREPARATIONS AND RESTORATIVE PROTOCOLS WORKSHOP

Participants will learn how to perform minimally traumatic preparations and direct Class II composite restorations utilizing modern matrices and flowable and paste composites. Participants may re-think the role of resins in their practice after seeing the possibilities in this renaissance of direct composites.

HANDS-ON COMPONENT

Modern composite preparations and matrixing for deep caries, peg laterals, black triangle closures and diastema closure. Simplified.

DIAGNOSIS, TREATMENT & PREVENTION OF CRACKED TEETH

Teeth are fracturing today in record numbers. Cracked and fractured teeth are now the third leading cause of tooth loss in industrialized nations. Dentistry's last great mystery, fracturing, is a poorly understood process.

ADVANCED DIAGNOSIS & PROACTIVE RESTORATIVE PROTOCOLS

Seeing previously invisible clues can lead restorative dentists to more appropriate early treatment of compromised teeth before devastating fractures, pulpal involvement and periodontal breakdown occur. Interactive case presentations will answer the age-old questions:

- What does this crack mean?
- Can I splint a cracked tooth with composite?
- When should I do endodontics, when do I extract?
- What is the optimal design?
- What is the optimal composite and porcelain material?

BONUS EXERCISE

Composite and porcelain occlusal onlays to splint a cracked tooth. (Time permitting).

PACE
Program Approval for
Continuing Education

Ontario Academy of General Dentistry (Approval #219289)
Academy of General Dentistry Approved PACE Program Provider. FAGD/
MAGD Credit. Approval does not imply acceptance by a state or provincial
board of dentistry or AGD endorsement. 01/01/2010 - 12/31/2017
