

MANAGEMENT OF TRAUMATIC DENTAL INJURIES

DRS. WAYNE NAKAMURA, KENT OCHIAI, & ANKIT KESHAV

WHAT YOU'LL LEARN:

- ✓ To identify common injuries both sports related and those that occur in our activities of daily living and the age groups and cohorts most commonly at risk for orofacial injuries.
- ✓ Classification of the types of injuries, hard and soft tissue involvement. Knowing why time is crucial in the long-term prognosis for treatment of these injuries.
- ✓ Having a prearranged examination protocol with the knowledge of which radiographic and imaging to use
- ✓ Management of the common traumatic dental and alveolar/TMJ injuries. Knowing when to splint injured and luxated teeth with what materials and for what length of time
- ✓ Know the current management of pulpal exposures in teeth with both developed and undeveloped apices
- ✓ Prevention methods of traumatic dental injuries
