Periodontal, Regenerative, and Implant Procedures to Enhance Your Restorative Outcome: *An Interdisciplinary Team Approach*

Recent advancements in treatment modalities for periodontal, regenerative and implant therapies have all had a significant impact on Comprehensive Care Dentistry. This interactive presentation will provide a clinical and evidence-based review of the various innovations in hard and soft tissue regeneration, perio-plastic-surgical procedures, implant site development, and implant therapies.

A myriad of case presentations and treatment modalities for tooth preservation to tooth replacement will be highlighted. Comprehensive treatment planning, proper case selection, and excellent surgical and restorative execution are paramount to achieving optimal functional and esthetic results.

LEARNING OBJECTIVES

- Understand the impact that interdisciplinary care plays in a positive patient experience
- Identify periodontal health goals that will greatly impact effective case presentation and treatment acceptance
- Highlight the benefits of Bioactive Modifiers/Growth Factors in hard and soft tissue regeneration
- Define numerous advancements in technology and treatment modalities that can enhance your restorative outcomes
- Communicate the benefits of perio-plastic surgical procedures on your cosmetic outcomes
